

Skill Builder Project

Make a puppet frame using the basic design outlined below. You will need at least four pieces of 1 cm X 1 cm wood (Jinx Wood) and one small dowel. Cut 2 pieces of Jinx wood 10 cm each and one 12 cm long. Connect these pieces using glue and paper fasteners. Use a fourth piece of wood as a lever arm, supported between the two vertical pieces of wood. Drill a hole for the dowel through the supports and the lever arm. Fix the dowel with glue, but allow the arm to pivot freely.

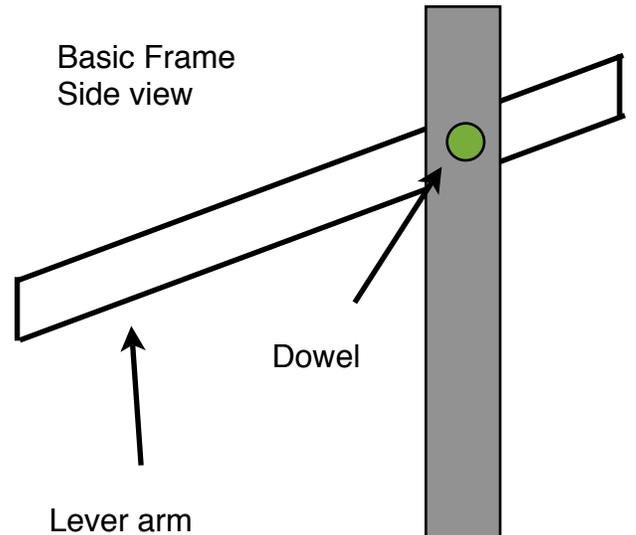

Basic Frame
